Access is not allowed to people who:

- are under the influence of alcoholic beverages;
- are under the influence of hallucinogenic, psychotropic substances or medicinal products the effects of which are liable to affect the safety of the drawing;
- are in an advanced state of fatigue or suffer from a temporary condition that can generate a state of danger in the conditions of use of weapons and ammunition;
- show signs of instability or psychic lability.

Organization of the shooting range

The technical area of the shooting range comprises:

- the training and training room of the persons to enter the shooting range for the firing session
- the shooting range area for the preparation of the weapons and ammunition for the shooting session
- the firing shooting range composed of the drawing, firing and capture field area of the projectiles
- the access corridor to the shooting range technical enclosure.

The "Broz Guns" sports and recreational shooting range is provided with staff engaged with a work contract appointed by internal decision of the General Manager and authorized under the terms of the law. The staff is responsible for the quantity and quality of all the means and materials in the technical premises and cares for their proper functioning, ensures and supervises all the activities that take place in the shooting range.

The shooting range is provided with a first-aid point. During the firing, accident health care is ensured by authorized specialist personnel. Access to the shooting range is only performed in the presence of the shooting range staff. Access to the firing line is done only through the training and training room, with the approval of the shooting range instructor / firing co-ordinator. Preparation of Ammunition and Ammunition for Shooting The ammunition is transported from the specially designated room for storing (the ammunition repository) in the area of training of weapons and ammunition within the shooting range, in the amount required for the scheduled firing sessions. The maximum amount of cartridges allowed in the weapons and ammunition preparation area within the shooting range is 1,000 pcs. single-type cartridges for a series of shooters.

Packagings, if necessary, are disassembled with specialized tools for this purpose. Ammunition preparation is performed by specialized personnel of the shooting range.

The weapon is transported from the specially designed room (weapon room) to the training area of the weapons and ammunition within the shooting range, by the specialized hired personnel. It checks before the firing, the weapon and ensures its integrity and proper functioning. No more than 20 weapons of the same type (the same caliber) are admitted to the shooting range technical space.

Execution of Shooting

The firing line instructor / firing co-ordinator shall only commence firing after he has personally checked that all rules of the technique of security and protection of munitions are respected, that the personnel in the shooting range knows these rules and how to perform the individual tasks, that the ammunition and equipment of the shooting range is working properly (lights, ventilation, mobile / fixed targets, etc.). It is forbidden to shoot with weapons which are not in the proper functioning state or with ammunition which is not accompanied by documents certifying the appropriate quality. In the "Broz Guns" Sports and Recreational Shooting Range, current shooting is made on 9 shooting lines at 25 m and 2 firing lines at 50 m distance.

Shooting below 3 m is forbidden.

In "Broz Guns" Sports Shooting and Recreation Field is performed only by guided shooting. It is forbidden in the shooting range to pull the unguided weapon. In the "Broz Guns" Sports Shooting Range, can only be used weapons for which it was authorized are executed.

It is forbidden to shoot with inappropriate weapons and ammunition.

A maximum of 24 shooters are admitted to the technical area of the shooting range, as follows: Twelve shooters in training and training and twelve shooters on the firing line of the shooting range. Charger charging operation is executed as far as the shooter (after being trained) or by the shooting range instructor only on the firing line. Access to the firing line is only allowed with the approval of the shooting range instructor / shooter coordinator. The firing is executed by the shooters in the presence and under the supervision of the shooting range instructor / firing co-ordinator. It is forbidden to have any other person on the firing line and in the training and training room. Shooting incidents (jamming, miss fires, etc.) are corrected on the firing line only by the shooting range instructor / firing co-ordinator. Removal of the weapon with which the pull is carried out, in case of malfunctions, is executed outside the technical enclosure of a shooting range (only in the armor workshop). The removal of the weapon outside the technical enclosure is only

executed after it has been unloaded and insured. After firing, the weapon is unloaded and secured. When firing is not performed on automated target-type installations, moving to the target can only be done with the approval of the shooting range instructor / firing co-ordinator.

After the firing of each shooter has been completed, the ammunition elements remaining from the shooting are gathered and stored in the container for this purpose. At the end of the shooting day, the firing co-ordinator draws up the ammunition consumption report.

Procedure to record shootouts in the shooting range

For firing with lethal / non-lethal ammunition and ammunition, shooting range service personnel prepare a report that is approved by the Director of the shooting range. The report will necessarily specify the following information:

- the contract (internal theme) or the list of shooters;
- the date (or period) and time between which draw is made;
- the weapon with which the firing is executed;
- ammunition related to shooting;
- the participants (shooting range service staff), the firing line instructor and / or the firing coach.

The firing order is drawn up by the shooting range service staff and approved by the Director of the shooting range.

The firing order will necessarily specify the following information:

- the contract (internal theme) or the list of the persons who shoot;
- the date (or period) and the hours for the shooting;
- the weapon with which the shooting is executed;
- ammunition related to shooting;
- the participants (shooting range service staff), the firing line instructor and / or the firing coach, the firearms, the sanitary staff, the service machine and its driver and the service firefighter.

Also, only those who have been trained and signed the collective instruction sheet (Annex 4) have the right to use weapons and ammunition. Each firing that is executed in the shooting range is recorded in the Register of Weapons and Ammunition, a register numbered and registered with the police body, which is completed by the service personnel of the shooting range. The following information must be entered in the register:

- current number;

- the date and the length of time that the drawing was executed,
- the name, surname, serial number and number of the identity document belonging to the natural person or, where appropriate, the name and address of the legal person who organized and executed the drawing;
- the category of weapons used for shooting (type of weapon, characteristics), name and surname of the supervisor or, where appropriate, of the firing line instructor or firing co-ordinator;
- headings to be signed by the above mentioned persons;
- statements about eventual events during shooting or other observations.

The registrar shall be kept by the administrator of the firing shooting range which is obliged to place it at the disposal of the competent police body whenever requested to do so. Upon firing, the shooting range service staff draws up the consumption report and passes it for approval to the Director of the shooting shooting range, then operates and reports the information to the specialized accounting department. Safety and labor safety rules and rules of conduct in the shooting range.

Shooting in the Broz Guns Sports and Recreation Field starts only after the provision of all the work safety measures in accordance with the instructions for the workplace or the special regulations established the firing co-ordinator.

Before firing starts, the firing line instructor / firing co-ordinator checks the proper functioning of the lighting system.

The minimum illumination values are:

- in the training and training room: 300 lux;
- within the shooting range: 300 lux (ambient)
- 1500 lux (on the surface of the targets);
- shooting range access ways - 300 lux.

In case of failure of the lighting installation, shooting is cut off immediately and temporary lighting measures are taken. It shall be prohibited to use lanterns or any other means of illumination with fuel. Draw can only be resumed after the fault has been remedied.

During all the shooting of the shooting range, the artificial ventilation system will operate. It is forbidden to pull off the ventilation system or. Concentrațiile maximum allowable gas, steam and dust in rooms inside the shooting range technique (except for line drawing) are provided in the regulations in force. It is forbidden to pull in the absence of the person providing emergency medical assistance in the event of an accident. In the "Broz Guns" sports and recreational shooting range, shooting is carried out only with authorized weapons and ammunition. It is forbidden to shoot with weapons and unauthorized ammunition. During firing, shooting range staff and

shooters are required to wear protective equipment (noise mitigation helmet and special protection goggles). The shooters will be trained prior to firing on the requirement of the protective equipment harbor and the way it is used.

Waste resulting from draws is evacuated from the technical area of the shooting range every day whenever necessary; Prior to evacuation, these wastes are thoroughly checked so that ammunitions are not present between them. Periodically, at least once a month, fine-grained cleaning of all rooms in the shooting rangeal enclosure (including dust removal from the walls, ceiling, floor, furniture, etc.) must be carried out. Daily after the shooting, the shooting rangeal staff is obliged to check all the premises in the technical premises, to find out and remove all the deficiencies noted; also disconnects all rooms of the shooting range from the power line, the ventilation system remains in operation and the access doors are closed by being provided with an access control security system connected to the dispatcher.
